“UNDERSTANDING INDIA”

Was it the Cradle of Human Civilization?

For nearly two centuries, European conquerors have progressed in diminishing India's global contributions using the Aryan Invasion Theory (AIT) which states that northern Indians migrated from outside and went on to create oppressive institutions. The British had used AIT to create destructive institutions against India and Hinduism and then to assume the patronizing role of saviors – to save India from Indians. New scientific studies in the last two decades heavily contradict AIT. This informal and non-technical talk will summarize these studies, telling us about the centrality of India in human civilization. The talk attempts to answer why an absurdity such as AIT has been so ubiquitous for so long in the first place and suggests to restore and resume the study of history without the baggage of AIT.

VENUE : Gold Room, Memorial Union

DATE & TIME : April 2, 6:30pm
